

WRITTEN SCISSORS LIFT TEST

Name: _____

Date: _____

1. Who may operate a scissorlift?
 - A. Any journeyman
 - B. Any supervisor
 - C. Any trained and authorized employee
 - D. Anyone that has run one previously

2. When does the scissorlift need to be inspected?
 - A. Daily
 - B. Weekly
 - C. Monthly
 - D. Whenever your supervisor feels that it might be due.

3. A pre-start check should include the following?
 - A. A complete walk around inspection of all frame and platform structure to look for cracks or defects.
 - B. Daily lubrication, fluid levels, and tires for adequate tire pressure and make sure there are no nicks or cuts in them.
 - C. Check and verify that all controls, switches and safety devices are working properly.
 - D. All of the above.

4. Because it is equipped with ground controls, it is permissible for you to load materials on the ground and send them to a coworker at a higher elevation, while you stay on the ground so you won't take up space on the scissorlift?
 - A. True
 - B. False

5. If the scissorlift is classified as a "rough terrain" scissorlift, it is permissible to operate it on uneven, soft surfaces in the elevated position.
 - A. True
 - B. False

6. What is the minimum distance that needs to be maintained between the machine and its load from an energized power line?
 - A. 5 feet
 - B. 10 feet
 - C. 15 feet
 - D. 20 feet

SCISSORS LIFT TEST

7. It is important to know the locations of drop-offs, shaft openings, excavations etc., when operating a scissorlift.
- A. True
 - B. False
8. When working at elevated positions in the scissorlift it is not necessary to flag off the area below to warn co-workers in the area.
- A. True
 - B. False
9. When the scissorlift does not reach the desired elevation, it is permissible to get a stepladder or use a board on the top rail to achieve the necessary height.
- A. True
 - B. False
10. If the scissorlift is equipped with a tilt alarm and it sounds, you need to?
- A. Continue to work because it might be a false alarm.
 - B. The platform is in an unstable condition and no work should continue until the machine has been moved to more level ground.
 - C. Bypass the alarm so it won't activate.
11. If you encounter any mechanical problems with the machine or the controls, you need to?
- A. Keep working, finish the job and then have it looked at.
 - B. Tag out the machine with a danger tag and notify your supervisor immediately.
 - C. Go get another scissorlift
 - D. Go take a break.
12. It is important to know the capacity of any scissorlift, manlift or any aerial lift platform.
- A. True
 - B. False
13. When you have finished with the scissor lift, you need to?
- A. Make sure the machine is switched off and the brake is set.
 - B. Make sure that the platform has been cleaned off of all debris, dirt, etc.
 - C. If it is electrically powered, plug it into the charger and have it charged for the next use.
 - D. All of the above
